Enterprise Integration Patterns (EIP) are design patterns that help in solving recurring problems faced in the integration of enterprise applications.

Determine whether this statement is true or false.

- A. False
- B. True

Answer: B

NEW QUESTION: 4

SubscriptionAlerts, a table in the Azure Active Directory, has a column named SubscriptionID. The data type of this column is integer. You want to create a calculated column in the table named SubscriptionID that uses the format DAX function.

SubscriptionAlerts, a table in the Azure Active Directory, has a column named SubscriptionID. The data type of this column is integer. You want to create a calculated column in the table named SubscriptionID that uses the format DAX function.

SubscriptionAlerts, a table in the Azure Active Directory, has a column named SubscriptionID. The data type of this column is integer. You want to create a calculated column in the table named SubscriptionID that uses the format DAX function.

SubscriptionAlerts, a table in the Azure Active Directory, has a column named SubscriptionID. The data type of this column is integer. You want to create a calculated column in the table named SubscriptionID that uses the format DAX function.

Answer:

Explanation:

Explanation

Box 1: 60

One alert per minute will trigger one email per minute.

Box 2: 12

No more than 1 SMS every 5 minutes can be send, which equals 12 per hour.

Note: Rate limiting is a suspension of notifications that occurs when too many are sent to a particular phone number, email address or device. Rate limiting ensures that alerts are manageable and actionable.

The rate limit thresholds are:

- * SMS: No more than 1 SMS every 5 minutes.
- * Voice: No more than 1 Voice call every 5 minutes.
- * Email: No more than 100 emails in an hour.
- * Other actions are not rate limited.
