NEW QUESTION: 1

A user runs the command "dd if=/dev/xvdf of=/dev/null bs=1M" on an EBS volume created from a snapshot and attached to a Linux instance.

Which of the below mentioned activities is the user performing with the step given above?

- A. Initiating the device to mount on the EBS volume
- B. Formatting the volume
- C. Copying the data from a snapshot to the device
- D. Pre warming the EBS volume

Answer: D

Explanation:

When the user creates an EBS volume and is trying to access it for the first time it will encounter reduced IOPS due to wiping or initiating of the block storage. To avoid this as well as achieve the best performance it is required to pre warm the EBS volume. For a volume created from a snapshot and attached with a Linux OS, the "dd" command pre warms the existing data on EBS and any restored snapshots of volumes that have been previously

fully pre warmed. This command maintains incremental snapshots; however, because this operation is read-only, it does not pre warm unused space that has never been written to on the original volume. In the command "dd if=/dev/xvdf of=/dev/null bs=1M" , the parameter "if=input file" should be set to the drive that the user wishes to warm. The "of=output file" parameter should be set to the Linux null virtual device, /dev/null. The "bs" parameter sets the block size of the read operation; for optimal performance, this should be set to 1 MB.

NEW QUESTION: 2

Evaluate the following query: What would be the outcome of the above query?

- A. It executes successfully and introduces an 's at the end of each PROMO_NAME in the output.
- B. It executes successfully and displays the literal "{ 's start date was \} * for each row in the output.
- C. It produces an error because flower braces have been used.
- D. It produces an error because the data types are not matching.

Answer: A

Explanation:

So, how are words that contain single quotation marks dealt with? There are essentially two mechanisms available. The most popular of these is to add an additional single quotation mark next to each naturally occurring single quotation mark in the character string. Oracle offers a neat way to deal with this type of character literal in the form of the alternative quote (q) operator. Notice that the problem is that Oracle chose the single quote characters as the special pair of symbols that enclose or wrap any other character literal. These character-enclosing symbols could have been anything other than single quotation marks.

Bearing this in mind, consider the alternative quote (q) operator. The q operator enables you to choose from a set of possible pairs of wrapping symbols for character literals as alternatives to the single quote symbols. The options are any single-byte or multibyte character or the four brackets: (round brackets), {curly braces}, [squarebrackets], or <angle brackets>. Using the q operator, the character delimiter can effectively be changed from a single quotation mark to any other character
