D. RP1_1 is not a valid resource pool name because it contains an underscore at the end.

D. RP1_1 is not a valid resource pool name because it contains an underscore at the end.

Answer: A

Explanation:

Explanation

In the SQL Server Resource Governor, a resource pool represents a subset of the physical resources of an instance of the Database Engine. Resource Governor enables you to specify limits on the amount of CPU, physical IO, and memory that incoming application requests can use within the resource pool. Each resource pool can contain one or more workload groups. When a session is started, the Resource Governor classifier assigns the session to a specific workload group, and the session must run using the resources assigned to the workload group.
