We guarantee the pass rate of CDMS-SM4.0 dumps actual test is up to 99%, On the other hand, CDMS-SM4.0 exam study materials are aimed to help users make best use of their sporadic time by adopting flexible and safe study access.

With more competition on the increase, while the high quality materials are on the decrease to some other products without professional background, our CDMS-SM4.0 practice materials are your best choice.

Many candidates ask us if your CDMS-SM4.0 original questions are really valid, if our exam file is really edited based on first-hand information & professional experts and if your CDMS-SM4.0 original questions are really 100% pass-rate.

But to relieve your doubts about failure in the test, we guarantee you a full **CDMS-SM4.0 Exam Simulations** refund from our company by virtue of the related proof of your report card, We grew up fast with high passing rate and good reputation in this field.

Download latest CDMS-SM4.0 Exam Dumps for the DMI Certification Devices exam in PDF file format.

**NEW QUESTION: 1**

Your network contains an Active Directory forest named contoso.com. The forest contains a member server named Server1.

Server1 has several line-of-business applications. Each application runs as a service that uses the Network Service account.

You need to configure the line-of-business applications to run by using a virtual account.

What should you do?

- A. From the Services console, modify the Log On properties of the services.
- B. From Windows PowerShell, run the Install-ADServiceAccount cmdlet.
- C. From Windows PowerShell, run the New-ADServiceAccount cmdlet.
- D. From the Microsoft Application Compatibility Toolkit (ACT), create a shim.

**Answer: A**

**NEW QUESTION: 2**

You need to recommend a solution for publishing one of the company websites to Azure and configuring it for remote debugging.

Which two actions should you perform? Each correct answer presents part of the solution.

- A. From Visual Studio, configure the site to enable Debugger Attaching and then publish the site.
- B. Set the Web Server logging level to Information and enable logging.
- C. From Visual Studio, attach the debugger to the solution.
- D. Set the application logging level to Verbose and enable logging.
- E. Set the Web Server logging level to Verbose and enable logging.

**Answer: A,C**

Explanation:

Explanation

\* Scenario:

/ Mitigate the need to purchase additional tools for monitoring and debugging.

/A debugger must automatically attach to websites on a weekly basis. The scripts that handle the configuration and setup of debugging cannot work if there is a delay in attaching the debugger.

A: After publishing your application you can use the Server Explorer in Visual Studio to access your web sites.

After signing in you will see your Web Sites under the Windows Azure node in Server Explorer. Right click on the site that you would like to debug and select Attach Debugger.

E: When the processes appear in the Available Processes table, select w3wp.exe, and then click Attach. Open a browser to the URL of your web app. References: <http://blogs.msdn.com/b/webdev/archive/2013/11/05/remote-debugging-a-window-azure-web-site-with-visual-studio>

**NEW QUESTION: 3**

A company is migrating its web application to Amazon Web Services (AWS). The application is currently hosted on a Windows Server 2008 R2 EC2 instance. The application uses a Microsoft SQL Server database. The company wants to ensure that the application is highly available and scalable. The company also wants to ensure that the application is secure. The company is considering the following options:

A. Use Amazon ElastiCache for Redis to cache the application's data. Use Amazon ElastiCache for Memcached to cache the application's session data. Use Amazon ElastiCache for Amazon ElastiCache to cache the application's static content. Use Amazon ElastiCache for Amazon ElastiCache to cache the application's dynamic content.

B. Use Amazon ElastiCache for Redis to cache the application's data. Use Amazon ElastiCache for Memcached to cache the application's session data. Use Amazon ElastiCache for Amazon ElastiCache to cache the application's static content. Use Amazon ElastiCache for Amazon ElastiCache to cache the application's dynamic content.

C. Use Amazon ElastiCache for Redis to cache the application's data. Use Amazon ElastiCache for Memcached to cache the application's session data. Use Amazon ElastiCache for Amazon ElastiCache to cache the application's static content. Use Amazon ElastiCache for Amazon ElastiCache to cache the application's dynamic content.

D. Use Amazon ElastiCache for Redis to cache the application's data. Use Amazon ElastiCache for Memcached to cache the application's session data. Use Amazon ElastiCache for Amazon ElastiCache to cache the application's static content. Use Amazon ElastiCache for Amazon ElastiCache to cache the application's dynamic content.

**Answer: D**

Explanation:

Explanation

What Is Amazon CloudFront?

Amazon CloudFront is a web service that speeds up distribution of your static and dynamic web content, such as .html, .css, .js, and image files, to your users. CloudFront delivers your content through a worldwide network of data centers called edge locations. When a user requests content that you're serving with CloudFront, the user is routed to the edge location that provides the lowest latency (time delay), so that content is delivered with the best possible performance.

Using Amazon S3 Buckets for Your Origin

When you use Amazon S3 as an origin for your distribution, you place any objects that you want CloudFront to deliver in an

Amazon S3 bucket. You can use any method that is supported by Amazon S3 to get your objects into Amazon S3, for example, the Amazon S3 console or API, or a third-party tool. You can create a hierarchy in your bucket to store the objects, just as you would with any other Amazon S3 bucket.

Using an existing Amazon S3 bucket as your CloudFront origin server doesn't change the bucket in any way; you can still use it as you normally would to store and access Amazon S3 objects at the standard Amazon S3 price. You incur regular Amazon S3 charges for storing the objects in the bucket.
