NEW QUESTION: 2

Which element of Public Key Infrastructure (PKI) verifies the applicant?

- A.** Certificate authority
- B.** Registration authority
- C.** Verification authority
- D.** Validation authority

Answer: B

NEW QUESTION: 3

Note: This question is part of series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has an on-premises data center and an Azure subscription. The on-premises data center contains a Hardware Security Module (HSM).

Your network contains an Active Directory domain that is synchronized to an Azure Active Directory (Azure AD) tenant. The company is developing an application named Application1.

Application1 will be hosted in Azure by using 10 virtual machines that run Windows Server 2016. Five virtual machines will be in the West Europe Azure region and five virtual machines will be in the East US Azure region. The virtual machines will store sensitive company information. All the virtual machines will use managed disks.

You need to recommend a solution to encrypt the virtual machine disks by using BitLocker Drive Encryption (BitLocker).

Solution:

- * Deploy one Azure key vault to each region
- * Export two security keys from the on-premises HSM
- * Import the security keys from the HSM into each Azure key vault
- * Create two Azure AD service principals
- * Configure the virtual machines to use Azure Disk Encryption
- * Specify a different service principal for the virtual machines in each region Does this meet the goal?

A. No

B. Yes

Answer: B

Explanation:

Explanation

We use the Azure Premium Key Vault with Hardware Security Modules (HSM) backed keys.

The Key Vault has to be in the same region as the VM that will be encrypted.

Note: If you want to use a key encryption key (KEK) for an additional layer of security for encryption keys, add a KEK to your key vault. Use the Add-AzKeyVaultKey cmdlet to create a key encryption key in the key vault. You can also import a KEK from your on-premises key management HSM.
