Our JN0-103 exam training vce would be the most cost-efficient deal for you, We have tried our best to simply the difficult questions of our JN0-103 practice engine to be understood by the customers all over the world.

We have made our efforts to create outstanding products and provide the best quality JN0-103 exam questions material for the exam preparation.

#### **NEW QUESTION: 1**

Simple Network Management Protocol v2 (SNMP v2) is used frequently to monitor networks. Which of the following vulnerabilities does it always introduce?

- A. Remote buffer overflow
- B. Clear text authentication
- C. Man-in-the-middle attack
- D. Cross site scripting

**Answer: B**

Explanation:

Explanation/Reference:

Explanation:

One of the main problems with using SNMP v1 and v2 is the clear text "community string" that it uses to authenticate. It is easy to sniff and reuse. Most times, the SNMP community

string is shared throughout the organization's servers and routers, making this authentication problem a serious threat to security.

There have been some isolated cases of remote buffer overflows against SNMP daemons, but generally that is not a problem. Cross site scripting is a web application vulnerability that is not related to SNMP. A man-in-the-middle attack against a user datagram protocol (UDP) makes no sense since there is no active session; every request has the community string and is answered independently.

**NEW QUESTION: 2**

- A. Option A
- B. Option D
- C. Option B
- D. Option C

**Answer: D**

Explanation:

A hybrid cloud is an integrated cloud service utilising both private and public clouds to perform distinct functions within the same organization.

**NEW QUESTION: 3**

Which cisco NX-OS feature can be used to build highly scalable layer 2 multipath networks without utilizing the spanning tree protocol?

- A. FabricPath
- B. OTV
- C. vPC
- D. MST

**Answer: C**

**NEW QUESTION: 4**

In your OSM solution, you have implemented the following property correlation expression as part of an order item associated configuration for an order component named "ShippingFunction" in a product specification named "Device". What would be the result of this expression at run time?

- A. All order items in functions that depend on ShippingFunction in the Device product specification are also associated with this function.
- B. All order items in the order are associated with ShippingFunction.
- C. The child order items of the order items in ShippingFunction are also associated with this function.

- D.** No order items in the order are associated with ShippingFunction.
- E.** The child order items of the first order item in ShippingFunction are also associated with this function.
- Answer: C**
