Even though the pass rate is guaranteed by our reliable NCIE-DP NS0-527 exam practice vce, there is always something unexpected, Best of all is, our NS0-527 test engine environment is very similar to the real exam environment.

APP version is suitable for those who can only prepare in leisure time, Our accurate NS0-527 Dumps collection is closely linked to the content of actual examination, keeps up with the latest information.

So far we have helped more than 8456 candidates pass exams; the pass rate of our NS0-527 Exam Collection is high to 99.26%, For employees a good certification shows you technical professionalism and continuously learning ability.

Sfjbs is an authoritative study platform to provide our customers with different kinds of NS0-527 practice torrent to learn, and help them accumulate knowledge [Valid 4A0-250 Exam Topics](#) and enhance their ability to pass the exam as well as get their expected scores.

Please try downloading the free demo of NetApp Certified Implementation Engineer, Data Protection latest [NetApp Certified Implementation Engineer, Data Protection](#) dumps before you buy, then you will absolutely understand the popularity of our NetApp Certified Implementation Engineer, Data Protection exam questions.

Thanks to you guys and the great materials, The question and answer material is available in the form of interactive exam engine, Sfjbs NS0-527 100% Verified By Experts.

#### **NEW QUESTION: 1**

A network administrator is troubleshooting the OSPF configuration of routers R1 and R2. The routers cannot establish an adjacency relationship on their common Ethernet link.

The graphic shows the output of the show ip ospf interface e0 command for routers R1 and R2.

Based on the information in the graphic, what is the cause of this problem?

- A. The cost on R1 should be set higher.
- B. A backup designated router needs to be added to the network.
- C. The hello and dead timers are not configured properly.

- D. The priority on R1 should be set higher.
- E. The OSPF process ID numbers must match.
- F. The OSPF area is not configured properly.

**Answer: C**

Explanation:

In OSPF, the hello and dead intervals must match and here we can see the hello interval is set to 5 on R1 and 10 on R2. The dead interval is also set to 20 on R1 but it is 40 on R2.

### **NEW QUESTION: 2**

- A. Option D
- B. Option A
- C. Option C
- D. Option B

**Answer: C**

### **NEW QUESTION: 3**

What are two prerequisites for configuring a pair of Palo Alto Networks firewalls in an active/passive High Availability (HA) pair? (Choose two.)

- A. The peer HA1 IP address must be the same on both firewalls.
- B. The management interfaces must be on the same network.
- C. The firewalls must have the same set of licenses.
- D. HA1 should be connected to HA1, either directly or with an intermediate Layer 2 device.

**Answer: A,C**

Explanation:

Explanation/Reference:

To set up high availability on your Palo Alto Networks firewalls, you need a pair of firewalls that meet the following requirements:

The same set of licenses -Licenses are unique to each firewall and cannot be shared between the

firewalls. Therefore, you must license both firewalls identically. If both firewalls do not have an identical set of licenses, they cannot synchronize configuration information and maintain parity for a seamless failover.

The same type of interfaces -Dedicated HA links, or a combination of the management port and in-

band ports that are set to interface type HA.

Determine the IP address for the HA1 (control) connection between the HA peers. The HA1 IP address

for both peers must be on the same subnet if they are directly

connected or are connected to the same switch.  
Etc.
